

February 14, 2020

Dear Prep Charter Family,

Our first priority at Prep Charter high school is student and staff safety. As a way of ensuring that the water in our building is safe, we tested for lead on January 15, 2020. Our building engineer collected samples from water outlets and the samples were sent to a lab accredited by the State of Pennsylvania. The action level used was a minimum of 10 parts per billion (ppb) of lead. We are happy to report that no outlets currently in use tested above the limit.

There were fourteen (14) outlets tested at our school. Of those outlets thirteen (13) outlets produced water that was below the action level; safe to drink. Only one (1) outlet, which is not currently in use, tested above the level; this outlet was turned on for testing only.

Please be aware that exposure to lead can come from many sources in our society; soil, paint and even some consumer products. Prep Charter will continue to implement policies that place the well being of our students and staff first. Testing will be done on a five (5) year schedule and the results posted to our website; prepchs.org.

Sincerely,

David P. Wright,
CEO
